ABOUT US

Dedicated to developing safe, reliable and high-tech smart electrical products.

LEIDUN Electric Co., Ltd was founded in 2016 and is headquartered in Suzhou City, Jiangsu Province. We are a modernized electrical enterprise integrating R&D, production, and sales. In response to societal progress and development, and to meet market demands while aligning with the company's growth objectives, the Wenzhou Branch was opened in 2018 in Liushi Town, Yueqing City—known as "The Electric Capital of China".

Our primary products include components for photovoltaic (PV) systems, components and power distribution cabinets for both low and high voltage, new energy power equipment, and Internet of Things (IoT) circuit breakers. We have recently expanded our product line to include new energy charging piles, energy storage systems, combiner boxes, grid-connected cabinets, prefabricated cabin equipment and are continually developing new products..

Through continuous technological innovation, these products have achieved significant advancements in both design and technical performance. They are primarily utilized in various sectors, such as the State Grid Corporation of China, PV systems, railway traffic, fire protection, construction engineering, hospitals , and other fields. Market sales data confirm that our products effectively meet customer needs and project requirements, earning approval and positive feedback from clients.

All kinds of products manufactured by Leidun have been successfully sold across various provinces, cities, and autonomous regions, as well as exported to Europe, the United States, Australia, Asia, Africa, and other countries. However, we have not slowed our pace of progress. We consistently adhere to the management principle of "people-oriented, technology innovation", and have trained numerous excellent technical and management professionals. We have also developed a comprehensive set of enterprise management rules and regulations. Our staff is stable and well-trained, and we are equipped with complete production and processing facilities, as well as quality testing equipment. We value our market reputation and the trust of our customers, which drives us to continually learn advanced technologies and management practices both domestically and internationally to enhance product quality.

We have successfully obtained the "CCC" certificate and "CQC" certifications, along with three system certifications and numerous honorary awards. Since our establishment, we have been dedicated to manufacturing new energy photovoltaic products and and operating in the high and low voltage electrical fields. Our enterprise development philosophy is centered on "specialization, excellence, growth", and our service concept is "perseverance". We aims to focus on global markets, strive for national brand recognition, and provide outstanding solutions for "carbon-neutral" and intelligent green electricity.

High Voltage Air Circuit Breaker (AC800~1140V)

LDW9 Series

Product Overview

LDW9 High Voltage Air Circuit Breaker (ACB), also known as an intelligent universal circuit breaker or frame circuit breaker, is designed for power distribution networks operating at an AC 50Hz, with a rated working voltage 800V~1140V and a rated working current of 7500A.

This ACB is utilized for the distribution of electrical energy and serves to protect cables and power equipment from various faults, including overload, under-voltage, short-circuits, and grounding issues. It incorporates a range of curve protection controllers that offer comprehensive protection functions, making it particularly suitable for power distribution networks that require enhanced power supply reliability and aim to minimize unnecessary power outages.

The 3H type smart controller is equipped with a communication interface that facilitates connectivity with field buses, thereby enabling four remote functionalities: "telemetry", "remote adjustment", "remote control" and "remote message" to fulfill the requirements of control automation. The integration of a leakage transformer with the corresponding smart controller provides leakage protection. This device can be utilized for motor fault protection within AC 50Hz, 400V network. Under normal conditions, it is suitable for infrequent starting of motors.

The products have successfully obtained "CQC" certification from the China Quality Certification Center.

⑪	◎ Button lock device ◎ Phase partition for drawer type circuit breaker ◎ Under–voltage release ◎ "OFF" locking device (key lock) ◎ Mechanical interlocking: 2 or 3 circuit breakers horizontal steel cable interlocking, 2 or 3 circuit breakers vertical lever interlocking ◎ External neutral N current transformer ◎ DC power supply module

Note：
The standard configuration includes an M–type intelligent controller, four sets of auxiliary switch conversion contacts, and a horizontal rear connection method;
Voltage value for the intelligent controller, shunt release, under–voltage release, and closing electromagnet mechanism should be indicated.

Terms of use

● Ambient Air Temperature：–5℃ to +40℃ (Please refer to temperatures derating factor for above +40℃ to +60℃).

● Installation Location：Install the ACB according to the requirements in the user manual. The altitude shall not exceed 2000m. (Please refer to high altitude derating factor for altitudes above 2000m). The vertical tilt of the circuit breaker should not exceed 5° .

● Atmospheric Conditions: The relative humidity of the air at the installation site should not exceed 50% at a maximum temperature of +40℃ . At lower temperatures, higher relative humidity is acceptable, such as reaching 90% at 20℃ . It is important to consider the condensation on the product surface due to temperature changes.

● Pollution Level：III

● Installation Category：The circuit breaker main circuit, undervoltage release coil, and power transformer primary coil are used for installation category IV. The installation category of other auxiliary circuits and control circuits is category II.

● ACB is suitable for electromagnetic environments；

● Install the ACB in an area free from explosion hazards, conductive dust, metal corrosion and insulation damage. It should be housed in a cabinet with a door frame, achieving IP54 protection level.

LDW9 Series

High Voltage Air Circuit Breaker (AC800~1140V)

ACB complies with following standards

- IEC60947-1, GB/T14048.1: Low voltage switchgear and controlgear – General rules
- IEC60947-2, GBT14048.2: Low-voltage switchgear and controlgear – Circuit-breakers
- IEC60947-4-1, GB/T14048.4: Low-voltage switchgear and controlgear – Contactors and motor-starters
- GB/T2421.1: Environmental testing for electric and electronic products – General and guidance
- GB/T14597: Environmental climatic conditions appearing in different altitudes for electrical products

Type 45 Air Circuit Breaker (AC400~800V)

LDW9 Series

Product Overview

LDW9 Type 45 Air Circuit Breaker (ACB) is designed for AC 50Hz power distribution networks, with a maximum rated working voltage of 800V and a rated working current 400~6300A.

It is used to distribute electrical energy and protect circuits and power equipment from hazards such as overload, under-voltage, short circuits, and single-phase grounding faults. It features intelligent protection functions and has high precision selective protection, which improves power supply reliability. Additionally, it is equipped with a standard RS485 communication interface, enabling the four remote functions of "telemetry", "remote adjustment", "remote control" and "telecommunication" to fulfill the requirements of cluster control centers and automation systems.

This ACB features a compact structure, high breaking capacity, and no arcing distance. It can be used as an isolating switch when not equipped with an intelligent trip unit and sensors, marked as —/|—.

It complies with GB14048.2 "Low-voltage switchgear and controlgear – circuit breakers" and IEC60947-2 "Low-voltage switchgear and controlgear – Circuit breakers" and other standards.

Type 450 Air Circuit Breaker (AC400~690V)

LDW9 Series

Product Overview

LDW9 Type 450 Air Circuit Breaker (ACB) is a newly developed product by our company, utilizing advanced research and development technology. This device is characterized by its small size, high breaking capacity, and multifunctional capabilities.

It is suitable for general distribution systems, new energy generation and distribution systems, multi-source distribution networks, inverters, and grid connection operations and protection for distributed power sources such as rotating motor power supplies.

It complies with the circuit breaker standard GB/T14048.2 for Class B usage category.

CM3 Plastic Molded Case Circuit Breaker (AC400~800V)

LDM9 Series

Product Overview

LDM9 CM3 Plastic Molded Case Circuit Breaker (MCCB) is one of the new circuit breakers developed by our company using internationally advanced design and manufacturing technology.

Its rated insulation voltage is 800V, suitable for AC 50Hz, with a maximum rated working voltage of 690V (LDM9-63 is 400V), and a rated working current of up to 800A, used for infrequent switching of circuits and infrequent starting of motors. It has overload, short circuit, and undervoltage protection functions, which can protect the circuit and power equipment from damage.

This MCCB complies with the following standards:

- IEC60947-1 and GB/T14048.1 General rules
- IEC60947-2 and GB/T14048.2 Low-voltage circuit breakers
- IEC60947-4 and GB/T14048.4 Contactors and motor starters
- IEC60947-5.1 and GB/T14048.5 Electromechanical control circuit devices

② MCCB

③ Design No.

④ Ampere Frame Rating

⑤ Breaking Capacity, L: Standrd; M: Higher Type; H: Highest Type

⑥ Blank: Direct Operation; Z: Turn handle operation; P: Electric operation (230V/400V)(type I or type II)

⑦ 3 Poles ; 4 Poles

⑧ 2: Instantaneous tripping, 3: Compound tripping

⑨ Internal accessories

⑩ Blank: For power distribution; 2: For motor protection; TH: For three-proof occasions

⑪ Blank: No overload alarm and no tripping function, I: With overload alarm without tripping function

⑫ Rated Current (A)

⑬ Installation method: Front wiring; Back panel wiring; Insertable wiring

Terms of use:

- Ambient Air Temperature：−5℃ to +40℃ , the average temperature for 24 hours does not exceed +35℃ .
- Installation Location：The altitude shall not exceed 2000m.
- Atmospheric Conditions：The relative humidity of the air should not exceed 50% at a maximum temperature of +40 ℃ . At lower temperatures, higher relative humidity is acceptable, such as reaching 90% at 20℃ . It is important to consider the condensation on the product surface due to temperature changes.
- Pollution Level：III
- Installation Category：The circuit breaker main circuit and undervoltage release coil are used for installation category Ⅲ . The auxiliary circuits and control circuits are installed in category III.
- MCCB can withstand the effects of humid air, salt spray, oil mist, mold, and nuclear radiation.
- The maximum inclination of MCCB installation is ±22.5° .
- MCCB can operate reliably under earthquake conditions (4g).
- MCCB should be installed in a location that is free from explosion hazards, conductive dust, ametal corrosion and insulation damage.
- MCCB should be installed in a place that is not exposed to rain or snow.

Molded Case Circuit Breaker (AC415~1140V / DC250~1500V)

LDM9 Series

Product Overview

With the recent surge in market investment, the new energy sectors, including photovoltaic and wind power generation, are witnessing significant growth. Our company has developed the LDM9 (DC) series of high-voltage special Molded Case Circuit Breakers (MCCB), a result of extensive research into the operational conditions of both domestic and international new energy systems, as well as an assessment of customer requirements.

The LDM9 (DC) MCCB series are designed to operate at a rated working voltage of up to DC1500V and a rated current of up to 800A. Furthermore, the breaking capacity at DC 1500V can reach up to 50 kA, reliably providing short-circuit protection for the system.

Smart Molded Case Circuit Breaker

LDM9EL Series

Product Overview

The Smart MCCB integrates a residual current relay, contactor, and MCCB into one device. It is suitable for three-phase four-wire power supply systems with a grounded neutral point, providing protection against grounding faults, overcurrent, short circuits, phase loss, and overvoltage for circuits or electrical equipment. It can also prevent electrical fires and damage to electrical equipment caused by grounding faults, as well as provide indirect contact protection against electric shock hazards to individuals.

The product complies with the standards GB14048.2-2008 and GB/T22387-2008.

The overcurrent release is electronic, and the rated current can be adjusted according to the load conditions of the circuit. The three-stage protection curve is adjustable and can work in conjunction with lower-level circuit breakers to achieve graded protection. The electronic overcurrent trip unit offers high protection accuracy and is less affected by environmental temperature and installation position, serving as an upgraded product compared to thermal-magnetic overcurrent trip units (this product is available in both economical and standard types).

It is equipped with an RS485 serial interface, allowing the setting of protection characteristic parameters through a programmer, while also meeting the requirements for communication networking.

Rated residual short-circuit making (breaking) capacity (kA) I △ m	7.5	8.75	12.5	16.25	16.25
Rated residual operating current (Standard) I △ n	75mA/150mA/300mA/ 500mA		100mA/200mA/ 300mA/500mA	100mA/300mA/500mA/ 800mA	
	Leakage Alarm, Automatic Tracking				
Rated residual operating current (Electronic) I △ n	50mA/100mA/300mA/500m A/800mA/1000mA/ Leakage Alarm, Automatic Tracking				
Rated residual non-operating current	0.5 I △ n				
Residual current breaking time	≤ 0.2S S Type 0.5S 1S				
Limit non-start time	△ t>0.06s(2 I △ n)(S Type)				
Undervoltage action value (Standard)	145V ± 5% (Automatically turns on after voltage is restored)				
Overvoltage action value (Standard)	280V ± 5% (Automatically turns on after voltage is restored)				

Terms of use

- Ambient Air Temperature：−20℃ ~+60℃；
- Atmospheric Conditions：At lower temperatures, higher relative humidity is acceptable, such as reaching 90% at 25℃ . It is important to consider the condensation on the product surface due to temperature changes.
- Installation Location：The altitude should not exceed 2000 meters. Otherwise, it needs derating operation
- Pollution Level：III
- Installation Category：III
- The power supply sine wave distortion is less than 5%.

Interface Display

Operating Method	5−digit digital tube display					Description
Normally, the display will be cycled and protected for 2 seconds for each state.	U	A	○	○	○	Real−time voltage value of phase A
	U	B	○	○	○	Real−time voltage value of phase B
	U	C	○	○	○	Real−time voltage value of phase C
	I	A	○	○	○	Real−time current value of phase A
	I	B	○	○	○	Real−time current value of phase B
	I	C	○	○	○	Real−time current value of phase C
	L	D	○	○	○	The real−time residual current value

Fault analysis and troubleshooting

Failure Phenomenon	Cause Analysis	Troubleshooting Methods
Turn on the power switch, no digital display	The leakage protector is broken	Replace the leakage protector
When the power switch is turned on, the digital display is on, but the circuit breaker cannot be closed automatically.	The motor is broken or the mechanism is stuck	
The motor runs but cannot be closed	Electric operating mechanism is broken	
The power indicator light flashes and the switch cannot be closed.	Abnormal power supply.	Check the three−phase four−wire voltage
Tripping immediately after closing, digital display of current value over limit	Too much leakage from the wire or load or repeated grounding of the zero wire, or the lines are mixed	Check the wire and electrical equipment
No reclosing after tripping by pressing the test button	The time between pressing the test button and the last leakage trip automatic opening is too short, causing the leakage protector to lock itself	If the circuit breaker is reclosed after a leakage trip, the test button must be pressed after the circuit breaker is closed.
Pressing the test button does not trip	The main circuit voltage is too low or the leakage circuit breaker is broken	Check the circuit or replace the leakage circuit breaker
Pressing the test button can trip the circuit breaker, but the on−site bulb test will not trip the circuit breaker.	The neutral point grounding wire of the distribution transformer is not grounded or has poor contact. The test current cannot reach the operating current value.	Check whether the neutral point grounding wire or measure the grounding resistance meets the requirements, increase the power of the test bulb or check whether the grounding is good.

If you encounter other faults, please contact us and we will give you guidance and reply as soon as possible.

Communication Function

Communication interface	Interface Type	Communication Protocol
RS485	External terminals	'Residual current operated protective device communication protocol', can be customized according to customer requirements

Auto Recloser Circuit Breaker(AC)

LDB8-125 Series

Product Overview

The LDB8–125 (AC) Auto Recloser Circuit Breaker series is compatible with AC 50Hz or 60Hz, rated voltage of 230–400V, and rated current of up to 125A.

This product is designed to be controlled by the signal of an energy meter or a remote signal, allowing for intelligent opening and closing of the circuit. Additionally, it provides protection against overload and short circuit. It can also be used for infrequent operation of the line under normal circumstances, and is widely used in the intelligent transformation of power grids.

It complies with standards: GB10963.1, IEC60898–1.

Miniature Circuit Breaker(AC / DC)

LDB9-63 Series

Product Overview

The LDB9–63 Miniature Circuit Breaker (MCB) is designed for use in lighting distribution systems (type C) or motor distribution systems (type D). It is primarily used for protecting against overload and short circuits in AC 50Hz with a rated voltage of up to 230V or 400V and a rated current of 1A to 63A. It can also disconnect electrical devices and lighting lines infrequently under normal circumstances.

Standards compliant : GB10963.1, IEC 60898–1.

Ambient temperature: –5℃ ~+40℃ ; average value within 24h does not exceed 35℃ .

Installation location: altitude does not exceed 2000m.

T1 Surge Protector Devices(AC)

LD-MD Series

Product Overview

The LD-MD T1 Class Surge protector Device (SPD) series have several key features, including a large discharge energy, no leakage current, no follow-up current, modular installation, high safety factor, long service life, strong environmental resistance, and a voltage protection level of less than 2500V.

This SPD is designed in accordance with both IEC and GB standards. It is specifically used for the first-level surge protection of the power supply systems and easily installed on a standard 35mm rail.

It has a high lightning current discharge capacity, with a maximum impact current of a single module can reach 50kA (10/350 μ s). This makes it highly effective in preventing various surges, including direct lightning strikes. It is particularly useful for first-level surge protection of power supply systems in areas with a high risk of lightning, and can be combined for use in both single-phase and three-phase power supply lines.

T2 Surge Protector Device(AC)

LD-MD Series

Product Overview

The AC T2 Class Surge Protector Device (SPD) is installed in IPZ0–1 and above to protect low voltage equipment from lightning strike and surge damage. Applicable to PSD I+II class (B+C class) of various power supply systems. Designed according to IEC 61643–1/GB/T18802.1.

This product has the following features: 10/350 μ s, 8/20 μ s spark gap. It adopts sealed GDT technology, high discharge current capacity, extremely low voltage protection level, double terminals in parallel or series, multifunctional connection of conductors and busbars. In the event of a fault, the green window will turn red and a remote alarm terminal is provided. It uses high–performance MOV and can handle a maximum of up to 10/350 7kA.

T2 Surge Protector Device(DC)

LD-MD Series

Product Overview

The DC T2 Class Surge Protector Device has several impressive features, including a pluggable module for easy installation and maintenance, a large discharge capacity, and a fast response time. Additionally, it is equipped with a double thermal disconnect device for enhanced protection and multifunctional terminals for both wire and busbar connections. In the event of a fault, the device's green window will turn red and a remote alarm terminal is included for added convenience.

It is installed in IPZ0–1 and above, providing reliable protection against lightning strikes and surge damage to low voltage equipment. Applicable to PSD I+II class (B+C class) of various power supply systems. Designed according to IEC 61643–1/GB/T18802.1.

Smart Multi-function Power Meter

LD19 Series

Product Overview

LD19 series Smart Multi-function Power Meter is designed to cater to the needs of industrial and mining enterprises, public facilities, and intelligent power monitoring. It is a versatile product that is suitable for various applications such as energy management systems, substation automation, distribution network automation, industrial automation, community power monitoring, and intelligent distribution cabinets.

This power meter is capable of measuring all common power parameters, and has the advantages of intuitive display, high accuracy, and vibration resistance. Additionally, it features a pulse output and RS485 communication interface, allowing for remote transmission of data. It also offers optional functions such as switch input and output, analog output, harmonic content analysis, and multi-rate power statistics.

It complies with GB/T17215.322-2008 AC measuring equipment-Special requirements-Part 22: Static active energy meter (0.2S level and 0.5S level), GB/T17215.323-2008 AC measuring equipment-Special requirements-Part 23: Static reactive energy meter (level 2 and level 3)

(PV) Photovoltaic Energy Meter

DTSD3288 Series

Product Overview

DTSD3288 (PV) Photovoltaic Energy Meter in line with the performance indicators outlined in the technical requirements of GB/T17215.321–2008 "1 and 2 and static AC active energy meter", GB/T 17215322–2008 "0.2s and 0.5s static AC active energy meter" and DL/T614–2007 "Multi–function energy meter" national standards for multi–function energy meter.

Additionally, its communication capabilities comply with the requirements of DUT645–1997/2007 "Multi–function meter communication protocol". This meter is capable of time–of–use (TOU) measurement of forward and reverse active power, forward and reverse reactive power, Four–quadrant reactive power and maximum demand, and maximum demand occurrence time.

DTSD3288 Series

(PV) Photovoltaic Energy Meter

Product Features

- Measuring phase electricity, recording loss of voltage and current.
- Infrared remote control to call up display items, infrared meter reading during power outages.
- 3 meter reading cycle data, data can be automatically locked, 12 months of meter reading data.
- With programming prohibition function, demand reset function, power failure button wake-up function.
- Display the operating status of the meter and various parameter settings and various metering data through LCD.
- TOU metering active positive and reverse electric energy, which can be divided into 4 rates, 12 time periods, and 8 time zones.
- Real-time measurement of the effective values of voltage, current, power and current frequency of the three phases A, B and C.
- Forward active and reverse active pulse output, four-quadrant reactive pulse output, pulse width can be set by infrared or RS485.
- With the event recording function of loss of voltage, loss of current, overpower, power outage, incoming call, programming, demand clearing, broadcast calibration, etc.
- RS485 wired communication and infrared wireless communication, in line with DL/T645-1997/2007 standard event record (such as total clearing, demand clearing).

Microcomputer Anti-Island Protection

LDGD Series

Product Overview

Islanding is a phenomenon where a photovoltaic power station continues to supply power to a part of power grid that has lost voltage. For small photovoltaic power stations, it is important to have the ability to quickly monitor and immediately disconnect from the grid in the event of islanding. While most photovoltaic inverters have anti-islanding protection, it is recommended to install an additional anti-islanding protection device at the grid connection point for safe, stable, and reliable operation of the power system. It can quickly cut off the distributed island power supply.and also has the capability to automatically close when the system voltage is normal, according to user requirements

LDGD-800 Microcomputer Anti-Island Protection series utilizes a specially designed microcomputer device and control circuit to ensure rapidity protection action and accurate control. It can be centrally grouped into panels or installed in switch cabinets in a decentralized manner, with communication achieved through a 485 bus.

This device monitors the low-voltage side of the distribution transformer in real time, performs necessary control on the clean power supply, and prevents unplanned islanding..

Main technical parameters

- Device power supply: DC or AC 220V or 110V
- AC: Circuit voltage 380V, Current 5A or 1A, Frequency 50Hz
- Power consumption: Power circuit not more than 10W, AC circuit not more than 0.5 VA/phase
- Setting range: Current: 0.1In ~ 16In (In: rated current). Voltage: 10V ~ 800V
- Protection error range: Current (voltage): When the set value is lower than the rated value, the error does not exceed 0.02In (Un). When the set value is higher than the rated value, it does not exceed ±2%. Time: the action error time is not more than ±20ms, when the action time is set to Os, the action time is not more than 40ms

Microcomputer Protection Device

LDR Series

Product Overview

LDR microcomputer protection device is a new generation of relay protection equipment developed by our company specifically for power plants, substations, distribution stations, etc. in the power system. It offers comprehensive protection for primary equipment such as overhead lines, cable lines, transformers, motors, and capacitors at voltage levels of 35kV and below.

This device consists of a single-chip microcomputer with high integration and a bus without chip, high-precision current and voltage transformers, high-insulation strength export intermediate relays, and reliable switching power supply modules. Its advantages include high integration, complete protection configuration, strong anti-interference ability, low power consumption, and resistance to harsh environments. It is particularly suitable for direct and decentralized installation on switch cabinets.

Main technical parameters

- Rated frequency: 50Hz
- AC voltage: 100V (circuit voltage or VV wiring)
- Open circuit: DC 24V, 5mA (provided internally by the device)
- Open contact: It can continuously connect DC220V, 5A current (pure resistive load)
- Power consumption: DC circuit is not more than 5W, AC circuit is not more than 0.5VA
- Protection action time: All protection inherent action time is not more than 35ms at 1.5 times the set value
- Accurate measurement range: Phase current 0.1In~20In. Zero sequence current 0.1A~6.25A. Voltage 5V~150V

Conditions of use

- Relative humidity: 45%~90%
- Atmospheric pressure: 80~110kpa
- Normal operating temperature: The variation of the operating value due to temperature change within the range of –10℃ ~55℃ is no more than ± 1%

Power Quality Meter

LDDN-F335X Series

Product Overview

The Power Quality Meter is a versatile device that offers programmable measurement, display, harmonic power quality analysis, digital communication, and power pulse output.

It is capable of accurately measuring and displaying power data, as well as collecting and transmitting it. This device has a wide range of applications, including substation automation, distribution automation, intelligent buildings, and enterprises.

It boasts a high level of accuracy in power measurement, management, and assessment, with a precision of 0.5S. Additionally, it features LCD display for on-site viewing and a remote RS-485 digital communication interface, utilizing the MODBUS-RTUDL-T645 dual communication protocol.

Class A Power Quality Device

LDDN-F335 Series

Product Overview

The Class A Power Quality Device (F335) is primarily utilized for real-time monitoring of power quality parameters in power grids. It serves as a reliable tool for grid to evaluate and enhance overall power quality with accurate data.

Its key features include data display, data storage, remote communication, and over-limit alarms for monitoring items.

Key Features

● Basic monitoring indicators:

○ Grid frequency, three-phase fundamental voltage, current effective value, fundamental active power, reactive power, power factor, phase, etc.

○ Voltage deviation, frequency deviation, three-phase voltage imbalance, three-phase current imbalance, negative sequence voltage, current, voltage DC component.

○ Harmonics (2-65times): including total harmonic distortion rate of voltage and current, harmonic content rate, amplitude, and phase.

○ Advanced monitoring indicators: interharmonics, voltage fluctuation, flicker, voltage surge, sag, short-term interruption, temporary overvoltage.

● Display function:

○ The device panel is equipped with a large-screen color LCD display screen to display the data of power quality monitoring indicators in real time.

○ Setting function: Set, modify and view basic parameters and over-limit parameters of the device, and password protection.

● Record storage function:

○ The device has a built-in TF card, which can save basic monitoring indicators and advanced monitoring indicators in real time. The real-time data can be saved on the device for up to 1 year, and then updated according to the "first in, first out" principle.

● Statistical function:

○ The device has an online statistical function for the main monitoring indicators, and can calculate the three-second average of the monitoring indicators within a minute.

● Communication function:

○ The device provides a variety of communication interface methods to realize real-time transmission of monitoring data or timed extraction and storage records. It can communicate with the remote power quality management center through the industrial Ethernet interface, and can also communicate with the remote through the RS232C/RS485 interface in GPRS mode (customized).

● Time synchronization function:

○ The monitoring device has a network time synchronization function, which can keep the clock consistent with the remote management center. At the same time, it has a B code time synchronization function to ensure the accuracy of the device clock.

● Event trigger recording function:

○ The event trigger threshold can be set according to customer requirements, and the real-time data and waveform before and after the event trigger can be recorded, and the event log can be saved for query.

LDDN-F335X Series

Power Quality Meter

Main technical indicators

- Max. flicker error: ±5%
- Max. voltage error: ±0.1%
- Max. voltage fluctuation error: ±5%
- Max. current error: ±0.1%
- Max. frequency error: ±0.01Hz
- Frequency measurement range: 42.5Hz~57.5Hz
- Max. harmonic error: Class A
- Max. interharmonic error: Class A
- Max. three-phase current unbalance error: ±1%
- Max. three-phase voltage negative sequence unbalance error: ±0.15%

Conditions of use

- Normal operating temperature: -10℃~ +55℃
- Extreme operating temperature: -25℃~ +65℃
- Relative humidity: 5%~ 95%
- Atmospheric pressure: 86kPa ~ 106kPa
- Altitude: ≤ 3000 m
- Protection level: IP50

Switchgear Intelligent Control Device

LDCK Series

Product Overview

The Switchgear Intelligent Control Device can directly replace existing primary circuit simulation diagram, temperature and humidity controller, live display and other products. This will effectively enhance the quality of the switch cabinet. The device is made of insulating flame-retardant engineering materials, making it compact and easy to install in various positions. Its ultra-thin design allows it to be installed on the door of the circuit breaker room, making it a cost-effective option. The product is suitable for used in 3~35KV indoor switch cabinets, such as central cabinets, trolley cabinets, fixed cabinets and ring network cabinets.

It is controlled by a microprocessor, ensuring stability, reliability, a long lifespan, and a strong anti-interference capability. The product offers various functions such as dynamic simulation display diagrams, temperature and humidity control in the cabinet, grounding switch indication, high-voltage live display and locking function, voice anti-error prompts, opening and closing state indication, energy storage indication, trolley position indication, remote/local operation, opening/closing operation, lighting operation, and RS-485 communication.

Its integrated layout simplifies the switch cabinet panel structure design, enhances the switch cabinet panel layout, and improves the switch status indication function and safety performance.

Main technical indicators

- Working power supply: AD/DC 100~265V, DC48V (optional)
- Power consumption: ≤ 10W
- Measurement accuracy: ±2℃ (temperature); ±5%RH (humidity)
- Working mode: cooling type
- Temperature control: 40℃
- Temperature hysteresis: 5℃
- Humidity control: 88%RH
- Humidity hysteresis: 5%RH
- Anti-electromagnetic interference ability: in accordance with IEC255-22 standards
- Contact capacity: 5A/AC, 250V resistive
- Operating environment: -20℃ ~+65℃ , ≤ 95%RH
- Dielectric strength: ≥ AC2000V
- Insulation performance: ≥ 100MΩ
- Dynamic flashing frequency: twice/second
- Relationship between switch input and LED digital display: dynamic configuration
- Communication method: RS485, MODBUS-RTU

Main function

This product can realize the functions of primary circuit equipment switch status indication, temperature and humidity intelligent control and circuit breaker operation according to user requirements. The device is equipped with an integrated layout in the switch cabinet, which simplifies the previous panel structure design of the switch cabinet, beautifies the panel layout, and replaces the existing primary circuit analog indicator, electromagnetic switch status indicator, grounding indicator, energy storage switch, circuit breaker switch/switch and other control and indicating devices. The device is easy to install and has a long service life, which can fully meet the needs of the power industry and ensure the safe and reliable operation of electricity.

Mini Dual Power Automatic Transfer Switch

LDQ3-63 Series

Product Overview

LDQ3-63 series Mini Dual Power Automatic Transfer Switch (ATS) is designed to efficiently switch between two power sources as needed. It is specifically suitable for dual power supply systems with an AC 50Hz, a rated working voltage of 220V (2P), 380V (3P, 4P) and a rated working current of up to 63A.

This product is equipped with overload and short circuit protection, as well as the ability to output closing signals. It is particularly well-suited for use in lighting circuits in various settings such as office buildings, shopping malls, banks, and high-rise buildings.

It complies with IEC60947-6-1 and GB/T14048.11 standards.

↓	↓	↓		↓		↓		↓
LEIDUN	Dual Power Automatic Transfer Switch	Design No.		Ampere Frame Rating		2P、3P、4P		Rated Current (A)

Conditions of Use

- Ambient Air Temperature: -5℃ to +40℃，the average temperature for 24 hours does not exceed +35℃ .
- Installation Location: The altitude shall not exceed 2000m.
- Atmospheric Conditions: The relative humidity of the air should not exceed 50% at a maximum temperature of +40 ℃ . At lower temperatures, higher relative humidity is acceptable, such as reaching 90% at 25℃ . It is important to consider the condensation on the product surface due to temperature changes.
- Pollution Level：III
- Installation environment: The operating location should be free from strong vibration and impact, no harmful gases that corrode and damage insulation, no severe dust, no conductive particles and explosive hazardous substances, and no strong electromagnetic interference.
- 使用类别：AC-33iB。

DIN Rail Dual Power Automatic Transfer Switch

LDQ5-63 Series

Product Overview

DIN Rail Dual Power Automatic Transfer Switch (ATS) is a device that can automatically switches power in a power grid system. It is primarily used to switch to backup power when the normal power fails, ensuring continuous operation of equipment. This product is widely used in situations where power outages are not allowed and can be operated electrically or manually.

It is suitable for AC 50 or 60Hz rated voltage 400V distribution or generator networks. The ATS has a solid structure, easy installation and maintenance, with a long lifespan and fast switching speed. It also offers safety and reliable conversion, overload protection, and energy-saving features. It is specially designed for DIN rail installation and is compatible with PZ30 distribution boxes.

It consists of a TSE and controller, and can be installed vertically in a control cabinet or distribution cabinet.

Photovoltaic knife switch

HD11F Series

Product Overview

HD11F series photovoltaic knife switch offers several convenient features. Firstly, it solves the issue of difficult installation commonly associated with traditional knife switches by providing two installation options: rail and base plate. Secondly, it eliminates the need for for opening the cover when wiring, making the process easier. Additionally, the full copper parts are thickened and a fastening ring design is added to ensure tight contact and prevent looseness. Arc isolation plates can also be installed for added safety.

This switch is applicable to control circuits with AC 50Hz, rated voltage up to 400V, and a rated impulse withstand voltage of 6kV. It can be used as an infrequent manual connection and disconnection circuit, as well as an isolation circuit in the power distribution systems of household appliances and industrial enterprises. This greatly improves the personal safety protection performance and prevents accidental electric shock.

It complies with GB/T14048.3 and IEC60947-3 standards.

Open Type Knife Switch

HD13BX Series

Product Overview

The open-type knife switch series produced by our company can greatly improve the performance of personal safety protection and prevent accidental electric shock.

This series of products is mainly used in low-voltage power distribution equipment for infrequent manual connection and disconnection and isolation of power supply.

Comply with standards: GB/T14048.3, IEC60947-3.

Knife Transfer Switch

HS13BX Series

Product Overview

The Knife Transfer Switch is designed for power lines with AC 50Hz and a voltage up to 1000V, or DC 1200V. It can handle a rated working current of 6000A or below, providing uninterrupted operation and isolation of the power supply.

This knife switch features double blades distributed on both sides of the static contact, which are secured with leaf springs and screws. In the event of a short circuit in the power grid, the electromagnetic locking force created by two parallel blades and spring sheet compensates for contact repulsion, resulting in improved electrical stability.

The conductive parts of the knife switch are attached to the base using an insulating bottom plate made of glass fiber pressed plastic, which offers high insulation strength and mechanical strength. Additionally, the pull rod is also made of glass fiber pressed plastic, ensuring a long mechanical life for the knife switch.
